As a *numeral*, G was anciently used to denote 400, and, with a dash over it, $\overline{G}$, 40,000.—In *music*, it is the mark of the treble cliff; and, from its being placed at the head, or marking the first sound in Guido's scale, the whole scale took the name *gamut*, from the Greek name of the letter.

I.

I is the ninth letter, and the third vowel, of the English alphabet. This vowel, in French, and in most European languages, has the long, fine sound which we express by *e* in *me*, or *ee* in *seen, meek.* This sound we retain in some foreign words which are naturalized in our language, as in *machine, intrigue.* But, in most English words, this long sound is shortened, as in *holiness, pity, gift.*—The sound of *i* long, as in *find, kind, arise*, is diphthongal.—This letter enters into several digraphs, as in *fail, field, seize, feign, vein, friend*; and with *o* in *oil, join, coin*, it helps to form a proper diphthong. No English word ends with *i*, but when the sound of the letter occurs at the end of a word, it is expressed by *y*: *alkali, banditti*, and a few other words of foreign origin, are the only exceptions.

As a *numeral*, I signifies *one*, and stands for as many units as it is repeated in times; as, II, two, III, three, &c. Among the *ancient Romans*, IO stood for 500; CIↃ, for 1000; IↃↃ, for 5000; CCIↃↃ, for 10,000; IↃↃↃ, for 50,000, and CCCIↃↃↃ, for 100,000.

I, formerly prefixed to some English words, as in *ibuilt*, is a contraction of the Saxon prefix *ge*; and, more generally, this was written *y.*

It is only the nominative case of the pronoun; in the objective we use *me*, as, *I* am attached to study; study delights *me*. In the *plural*, we use *we* and *us*, which appear to be words radically distinct from *I*.—In the early editions of Shakspeare, *ay* or *aye* was written *I*, but this use has long been obsolete.
